

# Proof and Clean

reliable, clean and eco-friendly

## The best return on investment

Many times you see your focus on the best investion – here at UNIFLEX it is Quality and user-friendliness.

UNIFLEX cleaning benches reliably remove all rubbish that is being made during cutting or crimping hoses.

UNIFLEX test benches give you safety in questions of warranty.

The best Return on Investment

Since 1972

## UNIFLEX History

In 1972, the machine builder and graduate engineer Peter Schröck established UNIFLEX Hydraulik GmbH in Frankfurt/Main. Owing to pioneering innovations and extraordinary product quality, the flourishing enterprise soon developed into a global provider of machines for hose production.

UNIFLEX-Hydraulik GmbH became a member of the Freiherren Waitz group in 1992. This laid the foundation for further growth. In 1996, the company occupied a new, larger office and production building in Karben, 10 km north of Frankfurt/Main.

The subsidiary UNIFLEX of America LLC, with its present registered office in Schaumburg near Chicago, Illinois, was established in 1998 to support the markets in the Americas. In June 2004, UNIFLEX opened a subsidiary in Singapore from where our Asia-Pacific customers are served. We are also represented by offices in Tangerang, Indonesia and Shanghai, China since 2007 and 2009, respectively. In 2013 subsidiaries opened in Montevideo, Uruguay and Bangalore, India.

Today, after more than 40 years, UNIFLEX is a system provider in hose production – from workshop equipment to production plants. Innovative and reliable as well as durable hose crimpers, cutting machines, pin prick tools, skiving machines, marking tools, test systems, software and cleaning machines have been and are being developed and marketed in close cooperation with leading hose manufacturers and users.

## Test benches

P 160

Hose lines that cannot withstand the high pressure for which they are designed can cause serious damage, resulting in high costs - often higher than the price of a test bench. Why take a risk that can be easily avoided?

By testing the quality of your products, you opt for safety. The P 160 or P 160 ECO-LINE workshop test benches allow for the efficient and safe final inspection and testing of hose lines. They are easy to operate and quickly become part of your routine procedures.

P 160

P 160 Ecoline

### Quality and safety

Fully enclosed test chamber

Also suitable for the static pressure testing of various hydraulic components such as valves, hydraulic cylinders, housings, quick-release couplings, etc.

Safety valve - when the hood is opened, all pressure is automatically released within 1/10 second

Hood with gas springs and transparent Makrolon® safety pane

Environmentally friendly test medium (water-oil emulsion)

Easy and safe to operate

Test bench can be retrofitted with extension element

Logging software/printer available as optional equipment (Control B+ Touch)

Compressed air filter with condenser

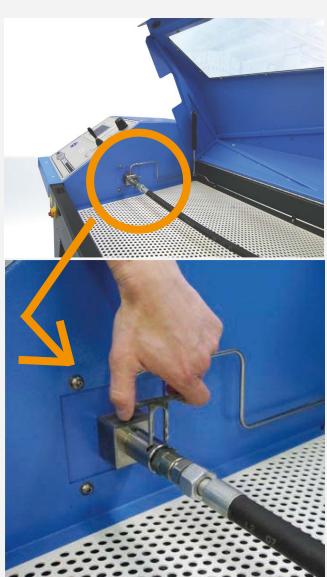

### Innovative technology for fast processing

Parts to be tested (hose lines) can be inserted quickly by means of our Steck-O system and without any time-consuming preparation or modifications to the tank

Fast filling and automatic pressure release of tested parts

### CE compliant

Hood with gas springs and transparent Makrolon® safety pane

**Steck-O system:**  
 -Clean, quick and reliable connection  
 -Push-in system for easy assembly  
 -Ample space in chamber  
 -Adapter for fast connection

Option to preconfigure pressure for serial testing

P160 equipped with integrated tank and closed testing medium circuit

The P160 is also available in stainless steel

## P 200

Der P 200 test bench with digital Control B+ Touch control and tight clamping system makes testing not only easier and quicker but also extremely flexible. Enter all test parameters at the user-friendly menu control and save them, if required with the relevant product number.

The test parameters for a product can then be reloaded at the push of a button, reducing tooling time while ensure reproducibility.

The patented tight clamping system does away with screws and threaded adapters. Pressure testing reveals any defects in the material or assembly at the earliest possible time.

# Test benches

## P 300

Testing has never been easier and quicker. With the P300, you can perform precision tests of hoses of up to 2500 mm in length and with pressures up to 1000 bar.

Test up to 120 hoses per hour, making use of 4 parallel test lines and our quick-clamping system. You can choose between automated and manual setup mode. The P300 comes with a number of standard features such as an internal lighting and a portable power aggregate, and caters for individual test logging.

P 300

P 300 Aggregate

### Innovation and quality

- Testing of up to 120 hoses per hour
- 4 parallel test specimen
- Combination of two test chambers (mirror arrangement)
- Fast workflow thanks to separately running test chambers (for alternate setup and testing)
- Quick-clamping system holding up to 4 hoses for parallel testing with customised settings
- Internal lighting system, adjustable machine feet and top-quality internal gear pump
- Quick changeover between automated and manual setup mode
- Separate portable power aggregate (with 2m connecting cable)
- Max. hose length 2500 mm

### Safety and CE conformity

- Automatic closing of test chamber
- Large inspection window made in transparent Makrolon®
- Display for bubble-free flooding on aggregate
- Customisable test logs and reports (for storage and printing)

\*depending on flooding time, hose length and diameter. Verified mean value.

Axially adjustable quick-change system with adjustable rotating head.

2 clamping discs per head, catering for various diameters (outside Ø 8-42 mm).

Sealing cone set (standard), DN 2.5-22mm, 6 cones

The P 300 can be adjusted in height

# Machine Control B+ Touch

## Control B for P160 B, P200 B

The P200 and P160 come with a UNIMATIControl-B + TOUCH control system as standard and includes a product data memory catering for up to 1000 product records. Even inexperienced staff can thus operate the machine without difficulty. On-the-spot configurations are made manually.

### Produktionsmanagement for serial production and customized cleaning

FIFO product memory
Dataset filtering for faster processing
Scanner menu linked to product datasets
Intuitive graphic user interface
<b>Maintenance from network PC</b>
User-friendly management of changes and maintenance of product datasets
Centralized job management from your desk saves time and money
Windows system for easy cable network integration

### Accessories:

Printer - 888.074

UTS - 807.350

### P160 B:

Only product memory

### P200:

Product memory +

### Automated processing:

Flooding time, testing time, blow-out time and pressure reduction

# Machine Control C.2 Touch

## Control C.2 for P300

The new CONTROL C system of the P300 comes with an intuitive user interface for UNIFLEX hose presses, test benches and other machines and includes a colour touch screen. The system is based on the tried and tested Control B+ Touch.

It features additional standardised menus (quick start menu and production menu) as well as various customisation options for menus and functions of different applications. The CONTROL C system caters for centralised control via HID from Windows terminals.

In addition, it includes a PFM option for quality assurance documentation and the tracking of product and machine data.

### Produktionsmanagement for serial production and customized cleaning

- FIFO product memory
- Dataset filtering for faster processing
- Scanner menu linked to product datasets
- Data input by scanner
- Intuitive graphic user interface
- Successor of FPM
- Adjustable pressure switching point
- Display: 6" real-time colour touch screen (16,7 million colours)

### Maintenance from network PC

- Centralized job management from your desk saves time and money
- Windows system for easy cable network integration

### Data upload and download

- Easy data upload and download with UTS devices, making use of external databases, scanners, USB sticks, and even remote maintenance via the internet
